WIZBEES TECHNOLOGIES | January 2026 - June 2026

-Developed a water level monitoring mobile application that tracks tank levels in real-time using sensor data. The app displays water level percentage, sends alerts for low/high levels, and connects to a cloud-hosted database via APIs. Built using modern mobile and backend technologies to ensure efficient data handling and user-friendly interface

PROJECTS

WATER LEVEL MOBILE MONITOR

-Developed a water level monitoring mobile application that tracks tank levels in real-time using sensor data. The app displays water level percentage, sends alerts for low/high levels, and connects to a cloud-hosted database via APIs. Built using modern mobile and backend technologies to ensure efficient data handling and user-friendly interface

Cloud Storage App

Developed a full-stack cloud storage mobile application that allows users to securely upload, store,download,and delete files using cloud-based storage services. Implemented file management features with authentication, REST APIs, and database integration for efficient data handling. Built the backend using Node.js and Express.js, integrated cloud storage services for file hosting, and developed the mobile frontend using React. Added features such as JWT authentication,file upload handling,download functionality,and real-time notifications.
